Making Fertiliser Decisions

Looking beyond N, P, K

With growers looking to cut costs and improve efficiency across a whole range of inputs, crop nutrition decisions are coming under increasing scrutiny.

Concerns over nutrient availability and the scarcity of organic options are encouraging farmers to look differently at the products they buy and how they source their fertiliser.

There is also growing awareness of the importance of soil health, not simply focusing on N, P & K, but considering valuable sources of well-balanced nutrition.

That's where Fibrophos comes in.

Produced from natural chicken litter, Fibrophos contains valuable secondary and trace elements, with nutrients supplied in proportions suited to grain crops.

It is also carbon neutral at source, helping to minimise its impact on the farm carbon balance.

Despite increases in conventional fertiliser prices, Fibrophos has not increased in price over the past year, making it an attractive value option from a renewable UK source.

Fibrophos helps maintain soil nutrient reserves efficiently, delivering phosphate and potash in a balanced, plant-available form.

Support yield today while helping protect soil fertility for the long term.

fibrophos

PK & trace element fertiliser

Balanced Grades

0-12-12 England and Wales

0-14-14 Scotland

Ideal for arable and grassland where balanced PKs are required

Potash Grades

0-00-16

0-12-18

0-05-20

0-09-18

Perfect for lower potash soils, silage and potash demanding crops where that extra potash is required

Why Timing Matters This Season

Plan ahead for the spring application window.

Geopolitical issues have disrupted the fertiliser market this year, creating uncertainty around supply and availability.

The challenge isn't simply whether fertiliser exists somewhere in the market. The key question is whether enough can be imported, manufactured, stored, processed, bagged, loaded and delivered to farms in time for the spring application window.

If too many orders are left until later in the season, the supply chain may struggle to process and deliver everything quickly enough.

There is also uncertainty around CBAM, which is expected to come into force on 1 January 2027, and the potential impact this may have on fertiliser pricing.

EARLY ORDERS HELP EVERYONE PLAN AHEAD

Early discussions with suppliers help the whole supply chain prepare and reduce the risk of delivery bottlenecks.

With production and delivery capacity limited, now is a good time to start planning your fertiliser requirements for the coming crop year.

Speak to your local ACT Area Manager today to discuss the options best suited to your farm.

Secure Your 2027 Maize Seed Now

We have a range of high-performing maize varieties selected for early harvest, strong yield, excellent feed quality and high starch production.

Jardinero

- » Exceptional early yield potential
- » Excellent flexibility for late sowing or early harvest
- » High starch and energy production
- » Fast establishment and strong early vigour
- » A dependable choice when timing matters

Dignity

- » Very early maturity for an earlier, more flexible harvest
- » Performs strongly on less favourable sites
- » Consistent yield and excellent feed quality
- » Helps maximise early forage production
- » A proven choice when reliability is critical

Exelon

- » Very early maturity with proven on-farm results
- » Performs across a wide range of sites and conditions
- » High-quality forage with excellent digestibility
- » Strong agronomic performance
- » A versatile variety you can rely on

GET THE VARIETY YOU WANT, NOT THE VARIETY THAT'S LEFT!

Potential supply pressure means the variety you want may not be available when you need it.

Talk to your Area Manager now and secure your 2027 maize seed.

Clampbuster Extra

A high-output short-term mixture designed to deliver rapid establishment, exceptional spring growth and valuable forage when you need it most.

Ideal for a first bite, early silage cut or following maize, it turns valuable growing time into valuable feed without tying up the field for the long term.

Westerwolds adds even greater early vigour to the proven Italian Ryegrass performance.

FAST FEED. BIG SPRING YIELDS. MAXIMUM FLEXIBILITY.

- » Fast establishment
- » Big early yields
- » Flexible use: graze, cut or follow maize
- » Up to two years' production
- » More forage per acre

**SECURE
YOUR SEED
EARLY**

Sowing rate:
12-14 kg/acre

Specialist Feed & Forage Solutions

Moist Mixes

Short of forage? We have the following moist mixes available all year round.

Action Power Mix	High-starch (40%, DM), high-energy feed ideal for finishing cattle and extending maize silage stocks.
Action Boost	Versatile, palatable feed that cost-effectively replaces or extends forage. (13MJ Energy, DM)
Action Extender Pro 17	Cost-effective source of energy and protein (17%, DM) to enhance or replace forage year-round.
Action Maxipro 22	High-protein (22%, DM), high-energy feed that drives intakes, milk yield and liveweight gain.

All mixes formulated for easy handling, consistency, and have excellent palatability.

PROTECT YOUR HERD FROM HIDDEN TOXINS

THE BENEFITS OF ULTRASORB-R

-  Reliable defence against mycotoxins & endotoxins.
-  Supports milk performance potential.
-  Reduces negative effects on herd fertility.

Actolick Sheep High Energy

A high energy feed bucket for ewes from tugging through to lambing, and finishing lambs at grass.

- » High energy (14MJ ME/kg DM) supports ewes when nutritional demand is greatest
- » 12% Protein supplied from all natural sources (no urea)
- » High vitamin E, selenium and omega-3 fatty acids support fertility, easy lambing and lamb vitality
- » Ideal where there is a risk of twin lamb disease

Typical intake:
75–150g/head/day

Available Sizes:
22.5kg & 100kg

Home n' Dry®

the foundation of alkalasystems technology

With many cereals harvesting at
poorer quality than ideal...
...how can we help improve the feed value?

-  Treating with Home n' Dry increases the digestibility of the cereal
-  Increases the protein by an average of 4% depending on application rate
-  Increases the pH of the cereal, allowing higher rates to be fed without any negative impact on rumen function
-  Enhancing feed efficiency and animal performance.

Forage Supplement & Energy Solutions

Filling The Forage Gap...

When forage stocks are low, maintaining energy, protein and rumen function can be challenging. Liquid feeds provide a palatable, convenient way to complement forage-based diets and support animal performance.

- » **Regumix** – Palatable molasses-based liquid feed, supplying energy and protein to make the most from forage. **27% Crude Protein (DM) 53% Total Sugars (DM)**
- » **PotBlack** – Cane molasses blend with liquid co-products and Regulated Release Protein, suitable for TMRs or de-dusting home mixes. **23.5% Crude Protein (DM) 44% Total Sugars (DM)**
- » **Regupro** – Palatable molasses blend with Regulated Release Protein, providing quality protein and energy to balance forage-based diets.
Available with 38% or 50% Crude Protein (DM)
- » **Fresh-Guard** – A ration conditioner that can be added into any bulk blend. Designed to help prevent feed spoilage and heating in TMRs and mixed rations, helping maintain feed quality and palatability.

Speak to your local ACT Area Manager to find the right solution for your forage.

Nadins Hydramix

A versatile cost-effective product to significantly improve hygiene in cow cubicles, poultry and stock sheds.

LOWER DUST LEVELS

HYGIENIC & ECONOMICAL

VERSATILE & SAFE

Boost your cattle's performance with Action Sweet Energy

A palatable, high energy dry feed designed to boost daily liveweight gains or milk yields.

Derived from surplus and by-product former foodstuffs from the human food industry, such as breakfast cereals, biscuits and confectionery.

Nutritional Profile: DM Basis (Site Dependent)

- » **Energy (MJ/KG)** 14.7 - 15.9
- » **Crude Protein** 10% - 12%
- » **Starch & Sugars** 54% - 57%
- » **Oil** 9% - 11%
- » **NDF** 15% - 17%

Available all year-round across the UK
29T or 20T tipped loads.
